

Exchange 2016 Mailbox Setup in Linux Clients

To set up Exchange 2016 on Linux:

1. Be sure to install the Evolution e-mail client and the EWS plug-in for it.
Do so using the following commands:
 - In Ubuntu, use **sudo apt-get install evolution evolution-ews**.
 - In Fedora, use **dnf install evolution evolution-ews**.
2. Launch the Evolution e-mail client. The new account wizard's **Identity** dialog shows up (if, for any reason, it doesn't, you may access it via the menu command sequence **File → Preferences → Accounts → Add**).
3. Enter your account name and e-mail address in the **Full Name** and **Email Address** fields, respectively, then click **Next**.

4. In the wizard's **Receiving Email** dialog, select **Exchange Web Services** from the **Server Type** drop-down list. Enter your user ID in the **Username** field, and replace the **exchange.weizmann.ac.il** host URL with **mail.weizmann.ac.il**. Finally, click **Fetch URL**, enter your password when prompted to do so and click **Next**.
