

WIS_Secure 2.0 Install on Android

To install the WIS secure service on Android, perform the following steps:

1. Save the certificate (.p12 file attachment) received by e-mail on your Android device, and install it via the **Install from storage** command under the **Security** section in **Settings**.
2. Enter any desired name in the **Certificate name** field and select **Wi-Fi** in the **Credential use** field.

3. To complete installation, enter the password received with the certificate.
4. Select **WIS_Secure** from the wireless networks available.
5. Make the following settings:
 - Select **TLS** in the **EAP method** (authentication method) field.
 - Set **CA certificate** to **(unspecified)**.
 - Select the certificate you've just installed (**cert**) under **User certificate**.
 - Enter your user name under **Identity**.

6. If required to enter a password, enter the one received with the certificate.
