

Secure Wireless Configuration on Linux Clients

Prerequisites:

- Save the certificate you have received by email. (a .p12 file).
- Select **WIS_Secure** from the available wireless networks.

Change the security options as follows:

- Security: **WPA & WPA2 Enterprise**.
- Authentication: **TLS**.
- Identity: use your own WIS user name.
- CA certificate: **No CA Certificate is required**.
- User certificate: this is the .p12 file you have received by email.
- User key password: use the password that was issued with the certificate.
